Patent No. 5955431
GENERAL INFORMATION:
APPLICANT: Stevens, Richard L.
TITLE OF INVENTION: MAST CELL PROTEASE PEPTIDE
TITLE OF INVENTION: INHIBITORS
NUMBER OF SEQUENCES: 65
CORRESPONDENCE ADDRESS:
ADDRESSEE: Wolf, Greenfield & Sacks, P.C.
STREET: 600 Atlantic Avenue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              OPERATING SYSTEM: DOS
SOFTWARE: FREESED for Windows Version 2.0

Patent No. 5968782
GENERAL INFORMATION:
APPLICANT: Stevens, Richard L.
TITLE OF INVENTION: MAST CELL PROTEASE THAT CLEAVES
ITLE OF INVENTION: FIBRINOGEN
NUMBER OF SEQUENCES: 74
CORRESPONDENCE ADDRESS:
ADDRESSEE: Wolf, Greenfield & Sacks, P.C.
STREET: 600 Atlantic Avenue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Conservative:

Patent No. 5968782
GENERAL INFORMATION:
TITLE OF INVENTION: MAST CELL PROTEASE THAT CLEAVES
TITLE OF INVENTION: FIBRINGGEN
NUMBER OF SEQUENCES: 74
CORRESPONDENCE ADDRESS:
MUMBERSEE: Wolf, Greenfield & Sacks, P.C.
STREET: Boston
CITY: Boston
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             IBM Compatible
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     COMPUTER READABLE FORM:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA

Result No.

comprises DNA sequence encoding proteolytic tryptase having an active site mutation.

Claim 7; Page 83-84; 126pp; English

The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a none secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its crombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, etc. site mutants

The present invention relates to recombinant human proteclytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteclytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The active site mutants of proteolyfic tryptase provide a tool to investigate the structural and functional properties of the protease and its the structural and functional properties of the protease and its crecombinant proteolyfic tryptase produced are useful as an antigen to generate anti-human tryptase antibitors, antagonists, agonists, etc.

This sequence encodes the human beta-tryptase. The invention relates to a signal sequence which is linked to a sequence encoding human beta-ctryptase. The DNA construct is useful for transforming human beta-ctryptase. The DNA construct is useful for transforming host cells to express, post translationally process and secrete enzymatically active human tryptase. The method is useful for the production of large amounts of tryptase with defined specifications. The transformant is useful for crystallographic studies, combinatorial library screens and X ray crystallographic studies. The tryptase produced allows for the crystallographic studies. The tryptase produced allows for the or crystallographic studies. The tryptase antibodies in various animals, can antigen to generate antihuman tryptase antibodies in various animals, can clevelopment of tryptase agonists antigonists, agonists etc. and to assay for the presence of tryptase in biological or other solutions. Tryptase inhibitors, antagonists, agonists etc. and to assay for the presence of tryptase in biological or other solutions. Tryptase inhibitors, antagonists, agonists of post-expression or post-purification modifications or manipulations to initiate tryptase activity and it has enzymatic activity which compares construction tryptase facilitates the large scale screening of combinatorial dransace for tryptase inhibitors as potential therapeutics and advances the understanding of the biological significance of tryptase in mark rell mark re
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               67 AGCCTGAGAGTCCACGGCCCATACTGGATGCACTTCTGCGGGGGGCTCCCTCATCCACCCC 126

The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the cative site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its crombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, etc. The present sequence encodes for recombinant human beta-II tryptase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           186
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

The present invention relates to recombinant human proteclytic tryptases, active site mutants of these tryptases and the methods for producing active site mutants of these tryptases and the methods for producing comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteclytic cryptase that lacks enzymatic activity due to the active site mutation, (the construct drives expression of a mature proteclytic tryptase that lacks enzymatic activity due to the active site mutants of proteclytic tryptase provide a tool to investigate active site mutants of proteclytic tryptase provide a tool to investigate the structural and functional properties of the protease and its encompainant proteclytic tryptase produced are useful as an antigen to generate anti-human tryptase antiholdies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, accive active active Claim 7; Page 91-92; 126pp; English.

                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic comprising a mattive site mutation (the construct drives expression of a matture proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutatis of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, anteagonists, agonists, etc. AAS20775-AAS20790 encode for recombinant human beta-II tryptase active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AGGIGCAACTGCGGGGAGCAGCACTCTACTACCAGGACCAGCTGCCGGTCAGCAGG 246

The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing active site mutants of these tryptases and the methods for producing comprising a promoter operably linked to a secretion signal sequence which is operably linked to a bNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the cative site mutanison, in hosts transformed to contain the construct). The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its carymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for 240 compounds which act as tryptase inhibitors, antagonists, agonists, etc. AAS20775-AAS20790 encode for recombinant human beta-II tryptase active ProLeuValCysLysValAsnGlyThrTrpLeuGlnAlaGlyValValSerTrpGlyGlu GlyCysAlaGlnProAsnArgProGly1leTyrThrArgValThrTyrTyrLeuAspTrp 667 GGCTGTGCCCAGCCCAACCGGCCTGGCATCTACACCCGTGTCACCTACTACTTGGACTGG Human; proteolytic tryptase; protease; recombinant beta-II tryptase; DNA encoding human beta-II tryptase active site mutant S194A #6. DNA construct for producing enzymatically-inactive proteolytic comprises DNA sequence encoding proteolytic tryptase having an 241 IleHisHisTyrValProLysLysPro 249 727 Arccaccacrargrececaaaaacce 753 Haak-Frendscho M; Claim 7; Page 113-114; 126pp; English. 20-JUN-2001; 2001WO-US019681. 21-JUN-2000; 2000US-00598982. The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing active site mutants of these tryptases and the methods for producing comprising a promoter operably linked to a secretion signal sequence which is operably linked to a non-secretion signal sequence tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the cative site mutation, in hosts transformed to contain the construct). The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its the structural and functional properties of the protease and its creombinant proteolytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antegonists, agonists, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        126

127 cadrodorióchdaccochácdeachdeadaccódacarcaaddarchadcaccaccarc

which is operably linked to a DNA sequence encoding a proteolytic tryptase with an active site mutation (the construct drives expression of a mature proteolytic tryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic tryptase produced are useful as an antigen to compounds which act as tryptase antibodies and indrug screening for compounds which act as tryptase inhibitors, antagonists, agonists, agonists, assetive

The present invention relates to recombinant human proteolytic tryptases, extive site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence

Claim 7; Page 86-87; 126pp; English.

```
The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comparising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic which is operably linked to a DNA sequence encoding a proteolytic cryptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its chost active site activity, and for modelling studies. The enzymatically-active, compounds which act as tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antagonists, agonists, active

The present invention relates to recombinant human proteolytic tryptases, active site mutants of these tryptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic a mature proteolytic tryptase site mutation (the construct drives expression of active site mutation (the construct drives expression of active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II tryptase. The active site mutants of proteolytic tryptase provide a tool to investigate the structural and functional properties of the protease and its enzymatic activity, and for modelling studies. The enzymatically-active,

This sequence encodes the human beta-tryptase. The invention relates to a paralles signal sequence which is linked to a sequence encoding human beta-tryptase. The DNA construct is useful for transforming human beta-tryptase. The DNA construct is useful for transforming host cells to express, post translationally process and secrete enzymatically active human tryptase. The method is useful for the production of large amounts of tryptase with defined specifications. The transformant is useful for pharmacological studies, combinatorial library screens and X ray crystallographic studies. The tryptase produced allows for the development of tryptase agonists and/or antagonists, is useful as an antiquent to generate antihuman tryptase antibodies in various animals, can be used in screening for compounds which act as tryptase inhibitors, antagonists, agonists etc. and to assay for the presence of tryptase in biological or other solutions. Tryptase inhibitors, antagonists, agonists etc. may be useful as therapeutics. The tryptase does not require any post-expression or post-purification modifications on manipulations to post-expression or post-purification modifications on manipulations to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  initiate tryptase activity and it has enzymatic activity which compares favourably with cadaveric tryptase. The availability of enzymatically active tryptase facilitates the large scale screening of combinatorial libraries for specific tryptase inhibitors as potential therapeutics and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           advances the understanding of the biological significance of tryptase in mast cell mediated diseases. The tryptase can be used to detect low
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ATCGTCGGGGGTCAGGAGGCCCCCAGGAGCAAGTGGCCCTGGCAGGTGAGCTCAGGAGTCA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5 IleValGlyGlnGluAlaProArgSerLysTrpProTrpGlnValSerLeuArgVal

The present invention relates to recombinant human proteclytic tryptases, active site mutants of these tryptases and the methods for producing active site mutants of these tryptases and the methods for producing comprising a promoter operably linked to a secretion signal sequence which is operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteclytic tryptase with an active site mutation (the construct drives expression of a mature proteclytic tryptase that lacks enzymatic activity due to the active site mutants of proteclyfic tryptase provide a tool to investigate the structural and functional properties of the protease and its crombinant proteclytic tryptase produced are useful as an antigen to generate anti-human tryptase antibodies and in drug screening for compounds which act as tryptase inhibitors, antegonists, agonists, etc. The present sequence encodes for recombinant human mature beta-II
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240
